

Home Assignment <3>: Automation using Actions Class in Selenium

Learning Objective:

Learn to automate interactions using Selenium WebDriver's Actions class to simulate mouse and keyboard actions.

Expected Time:

Best Case: 50 minutes

Average Case: 1 hour

Assignment Details:

Automate a series of interactions on the BigBasket application using Actions class in Selenium WebDriver.

Precondition:

- Initialize ChromeDriver
- Load the URL (<https://www.bigbasket.com/>)
- Maximize the browser window
- Add an implicit wait to ensure the webpage elements are fully loaded

Requirements:

1. Navigate to <https://www.bigbasket.com/>.
2. Click on "Shop by Category".
3. Mouse over "Foodgrains, Oil & Masala".
4. Mouse over "Rice & Rice Products".
5. Click on "Boiled & Steam Rice".
6. Filter the results by selecting the brand "bb Royal".
7. Click on "Tamil Ponni Boiled Rice".
8. Select the 5 Kg bag.
9. Check and note the price of the rice.
10. Click "Add" to add the bag to your cart.
11. Verify the success message that confirms the item was added to your cart.
12. Take a snapshot of the current page
13. Close the current window.
14. Close the main window.

Hints to Solve:

- Use Selenium's Actions class methods such as `moveToElement()`, `perform()` and Selenium methods such as `click()`, `sendKeys()`.
- Utilize appropriate locators and techniques to interact with web elements.
- Switch between windows using `getWindowHandles()` and `switchTo().window()`.
