

Hint for Assignment <1>: WebTable

Learning Objective:

To grasp and apply the concept of web tables in Selenium by retrieving information from tables within a given application.

Expected Completion Time:

Best Case: 30minutes

Average Case: 20 minutes

Assignment Details:

- Load the url - <https://finance.yahoo.com/>
- Click on "Crypto" tab
- Locate the table in the dom page
- Locate the cryptocurrency names in the table using specific row and column.
- Use loop to iterate the cryptocurrency names
- Print the cryptocurrency names

Requirements:

- Create java class named FinanceYahoo
- Load the url and click on "Crypto" tab
- Identify the table in the dom using `<table>` tag (`//table`)
- To access the row values, identify the row using `<tr>` to travel through the table
- To access the column values of the table, identify the column using `<th>/<td>`
- Act on the elements in the table using `WebElement` function by iterating through the rows and columns
- Print the cryptocurrency names from table.

Hints to Solve:

- Identify the element using the locator to click on the "Crypto" tab.
- Use `//table` to locate the table
- Use `findElements()` to extract a List of `WebElement` from the table
- Retrieving the cryptocurrency names and print it using `getText()`.
