

Home Assignment <Day2.2>: Demonstrating Dynamic Parameterization in TestNG

Learning Objective:

- To understand the concept of passing parameters to test methods, enabling the execution of the same test with varying data sets.

Expected Completion Time:

Best Case: 15 minutes

Average Case: 20 minutes

Assignment Details:

- Login to <https://login.salesforce.com>
- Click on the toggle menu button from the left corner
- Click View All and click Legal Entities from App Launcher
- Click on the Dropdown icon in the legal Entities tab
- Click on New Legal Entity
- Enter Name as 'Salesforce Automation by *Your Name*(Parameterized value)
- Click save and verify Legal Entity Name

Requirements:

- In this assignment, you will explore dynamic parameterization in TestNG using @DataProvider to pass different data sets to test methods.
- Identify the test steps that need to be parameterized based on the test cases.

Hints to Solve:

- Create a method to hold the test data in a 2D String array.
- Add a return statement to supply data to the test case.
- Annotate the method with @DataProvider.
- Set the dataProvider attribute with the value as the DataProvider method name.
- Execute the test case from the XML file

Reference Links:

TestNG Documentation on Parameters - <https://testng.org/doc/documentation-main.html#parameters>

Expected Outcome:

On completion, you should be able to:

- Understand how to use @DataProvider to pass different sets of data to test cases.
- Implement dynamic parameterization in your TestNG test cases effectively.
