

Marathon 1: Selenium Basics

OBJECTIVE

The objective of this marathon is to evaluate the learner's ability to design, develop, and execute a complete Selenium automation script for a real-time web application scenario.

The learner is expected to:

- Analyze the given end-to-end test cases and understand the functional flow of the application
- Identify appropriate web elements using Selenium locators
- Write a Selenium WebDriver script to automate the given testcases.
- Follow clean coding and automation best practices
- Push the completed Selenium automation script to their personal GitHub repository

LEARNING OUTCOMES

By completing this marathon test case, the learner will demonstrate:

- Practical understanding of Selenium WebDriver fundamentals
- Ability to automate a real-world application flow
- Experience handling dynamic UI behavior
- Knowledge of extracting UI data using Selenium
- Readiness for real-time automation interview scenarios

DELIVERABLES

The learner must submit the following in their personal GitHub repository:

- Selenium automation script for the given test case
- Meaningful class and method names
- Console outputs showing captured seat info, grand total, and page title

Test Case 1 – PVR Cinemas Booking

Test Case Document – PVR Cinemas Booking

TEST CASE DETAILS

Test Case ID: TC_PVR_BOOKING_001

Test Case Title: Verify movie ticket booking flow and capture booking summary details

Module Name: Movie Ticket Booking

Application URL: <https://www.pvrcinemas.com/>

Preconditions:

- Browser should be installed
- Internet connection should be available
- User location access may be enabled

Test Steps:

1. Launch the browser
2. Load the application URL
3. Select location as Chennai if not auto-detected
4. Click on Cinema under Quick Book
5. Select a cinema
6. Select date as Tomorrow
7. Select a movie
8. Select show time
9. Click on Book button
10. Accept Terms and Conditions
11. Select any one available seat
12. Click on Proceed button
13. Capture and print Seat info from Booking Summary
14. Capture and print Grand Total from Booking Summary
15. Click on Continue button
16. Close the popup if displayed
17. Capture and print current page title
18. Close the browser

Test Case 2 – Amazon Product Search

Test Case Document – Amazon Product Search

TEST CASE DETAILS

Test Case ID: TC_AMAZON_SEARCH_002

Test Case Title: Verify product search, filter, and result extraction for bags

Module Name: Product Search and Filters

Application URL: <https://www.amazon.in/>

Preconditions:

- Browser should be installed
- Internet connection should be available

Test Steps:

1. Launch the browser
2. Load the application URL
3. Add implicit wait using
`driver.manage().timeouts().implicitlyWait(Duration.ofSeconds(30))`
4. Enter "Bags for boys" in the search box
5. Select the searched suggestion or result for "bags for boys"
6. Capture and print the total number of search results displayed
7. Select the first two brands from the left-side filter menu
8. Apply sorting by selecting "New Arrivals"
9. Capture and print the first product details (name and discounted price)
10. Capture and print the page title
11. Close the browser
